Read ME

Description

This repository is a wrapper which can be used to run any http based game on the Jio phone or ant KaiOS platform. This tool can be best used to convert canvas based games as they are light and their navigation can be dealt easily.

Structure

The Wrapper can be hosted and can be used as a SAAS (Software as a Service). In this tools we need to upload their repositary which is needed to be used with Jio phones and the webapp will convert that repo to a Jio app which can be installed and used.

Reference

The sample Projects cointains some games taken from the Github and these can be converted easily with the wrapper tools.
